KEC · PROJECT CONTROLS

Updating progress and using the Site view

A short guide for site teams: send your update, then see it on the dashboard.

An update takes four steps

Everything is done from the dashboard. No files by email.

1

Get the template

One Excel file with a tab for each topic.

Site update → Download template

2

Fill it in

Only the tabs and rows you have news for.

In Excel, on your device

3

Upload and check

The dashboard checks your file before it is sent.

Site update → Choose file

4

See it live

Once approved, it shows in the Site view.

Site view → your project

The template: one tab for each topic

Fill only the tabs you are responsible for. Each tab feeds one part of the Site view.

Packages - Plots

Progress, dates and contract values for each package.

Shows in: Packages, Contract and financial

Areas of Concern

Problems that need attention, and the action to take.

Shows in: Challenges

Technical Submittals

Shop drawings, materials and method statements.

Shows in: Engineering tracker

Material Procurement

Purchase orders issued and material delivered.

Shows in: Procurement tracker

Quality Statistics

Non-conformance reports and site instructions: total and closed.

Shows in: Quality

Manpower

People planned and people on site for each package.

Shows in: Manpower

Contracts to be Awarded

Contracts still to come, and when they are needed at site.

Shows in: Contracts

Instructions

Read once. It explains every tab and rule.

Not uploaded

Filling a tab: follow the heading colours

Orange · required **Blue · optional** **Grey · automatic, do not type**

Data Date	Project Code	Project Name	Package/Plot	Contractor / Consultant	Planned Finish	Forecast Finish	Revised Value	Planned Value	Earned Value	PL%	Act. %
yyyy-mm-dd	*pick from list*	*automatic*	*pick from list*	*automatic*	*date*	*date*	*SAR*	*SAR*	*SAR*	*automatic*	*automatic*

Instructions | **Packages - Plots** | Areas of Concern | Technical Submittals | Material Procurement | Quality Statistics | Manpower | Contracts to be Awarded

Packages - Plots: one row for each package at each Data Date. Pick the Project Code first, then the package.

Data Date	Project Code	Project Name	Package/Plot	Contractor / Consultant	Planned Manpower	Actual Manpower	Variance (Planned - Actual)
yyyy-mm-dd	*pick from list*	*automatic*	*pick from list*	*automatic*	*people planned*	*people on site*	*automatic*

Instructions | Packages - Plots | Areas of Concern | Technical Submittals | Material Procurement | Quality Statistics | **Manpower** | Contracts to be Awarded

Manpower: type the planned and the actual number of people. The variance is worked out for you.

Rules that keep your file accepted

Do

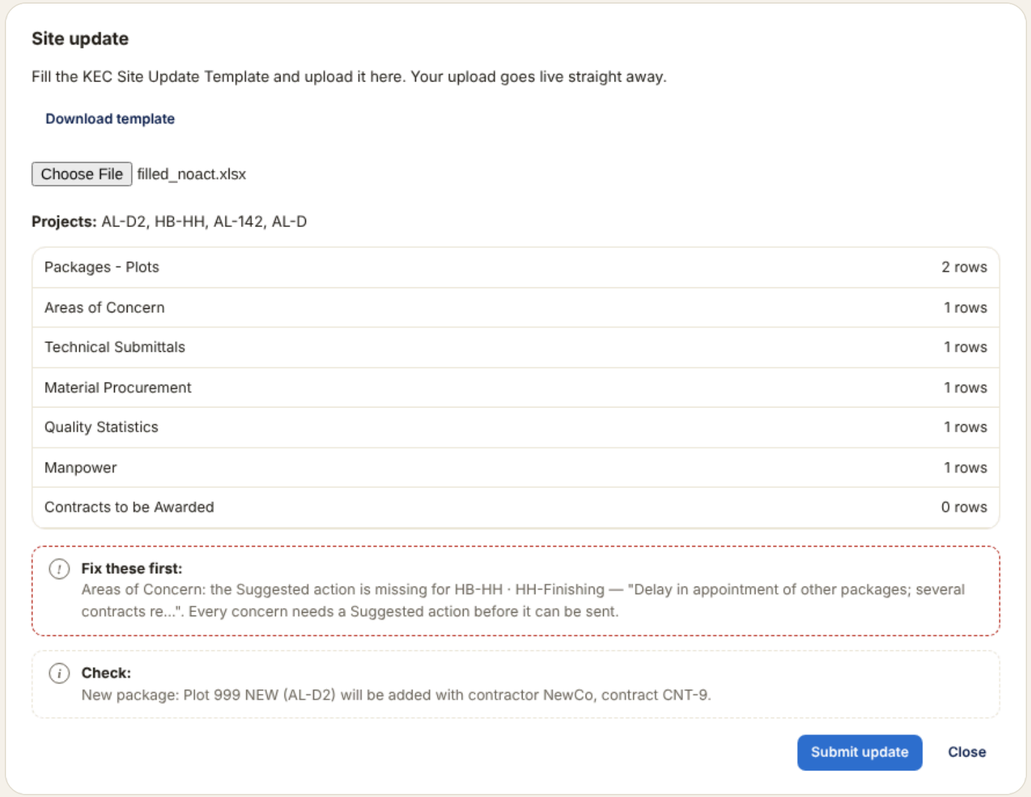

- Give every row a Data Date, a Project Code and a package.
- Use real Excel dates.
- Write one row per package. For submittals and quality, one row per type as well.
- Leave Challenge ID empty for a new concern. Keep the ID to update an old one.
- Give every concern that is not Closed a Suggested Action.

Do not

- Rename a tab or a column heading.
- Insert, move or delete columns.
- Type in grey cells.
- Type percentages in the progress tab. They are calculated.
- Add a new package yourself. Ask Project Controls.

Files made from an older template version are rejected. Always download the latest one from the dashboard.

Upload the file and read the checks

Fix these first

A red box means the file cannot be sent. Correct it in Excel and choose the file again.

Check

A grey box is a note, for example a new package. Read it, then continue.

What this update will change

Scroll the list and confirm it matches what you meant. Then press Submit update.

Step 3 · Upload and check · all numbers are hidden in this picture

What happens after you press Submit

Your account is set up in one of two ways. Project Controls decides which.

Submitted
Your file passed the checks and was sent.

→

Pending review
Project Controls checks it. Review accounts only.

→

Live in the dashboard
Everyone with access sees it in the Site view.

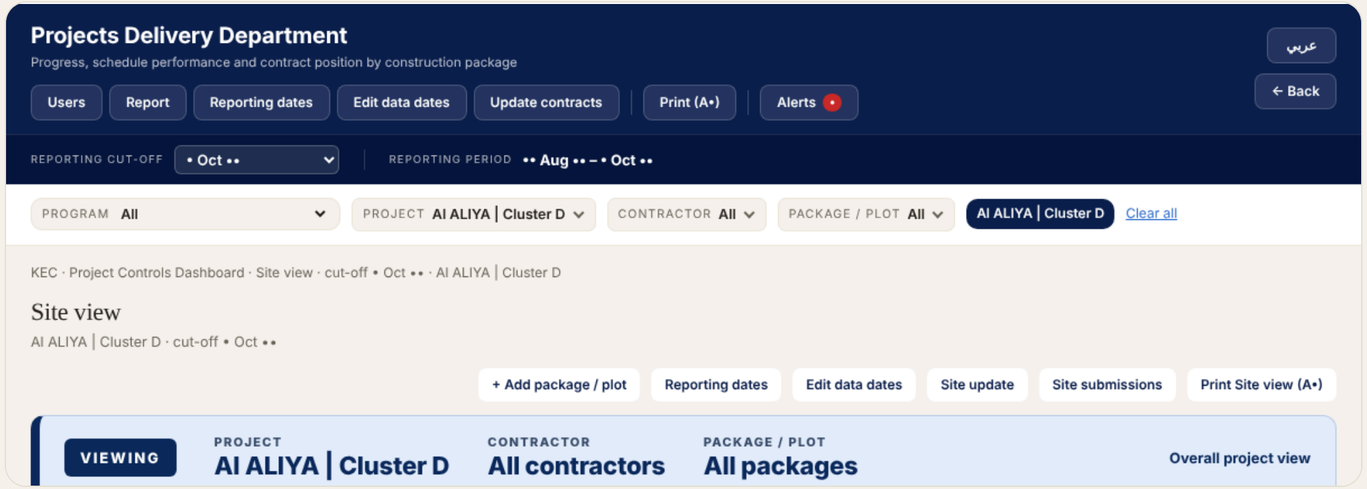

Live-update accounts
Skip the review step: your update goes live straight away.

If it is rejected
Fix the point raised and send the file again.

Rows you left out
Update Tower and Podium stays as it was.

Open the Site view for your project

One page that shows your project, package by package.

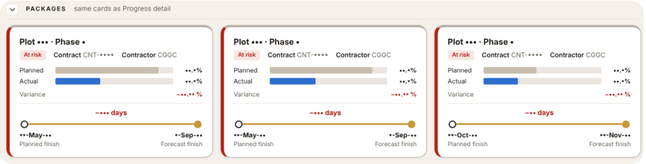

1. **Choose your project** in the Site view menu, then narrow by contractor or package.
2. **Site update** opens the upload window from this page too.
3. **Print Site view** makes a two-page A3 report.

Site view · picture shows the page header only

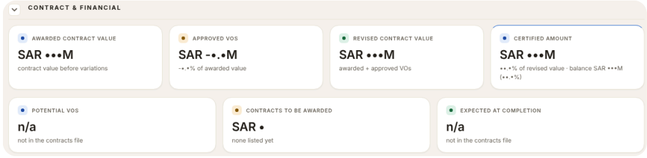

What each section tells you

Packages

Planned against actual progress, and the finish date.

Contract and financial

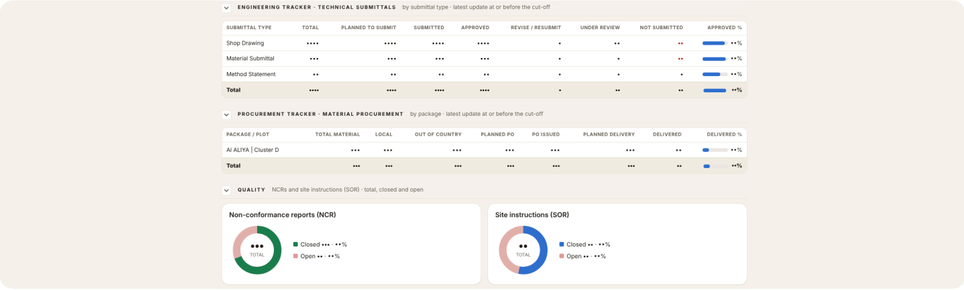

Contract value, variations and what is certified.

Manpower

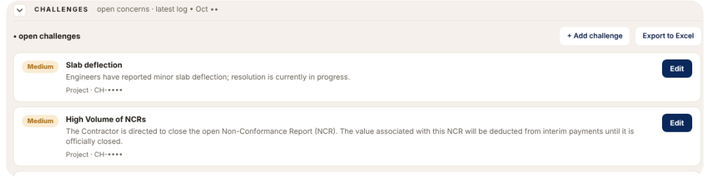

People on site against plan. A minus means fewer than planned.

Trackers and quality

Submittals, material orders and open quality items.

Challenges

Open concerns, with owner and action.

Tip: the arrow beside any heading collapses that section, and the page remembers your choice.

Before you press Submit

- I used the latest template from the dashboard.
- Every date is year-month-day and every code is from the list.
- Every open concern has a suggested action.
- The list of changes matches what I meant to send.
- I sent only the rows I updated.

Something not right?

A red box in the upload window tells you what to fix. If a figure on the Site view looks wrong, tell Project Controls and name the project, package and data date.
